The core functionality of the MongoDB support can be used directly, with no need to invoke the IoC services of the Spring Container. This is much like JdbcTemplate, which can be used "standalone" without any other services of the Spring container. To leverage all the features of Spring Data MongoDB, such as the repository support, you need to configure some parts of the library to use Spring.

It is also possible to add Javadoc to a library which you use. For this you need to have the Javadoc somewhere in your filesystem. To configure the location of the Javadoc for the JAR File, open the Java Build Path via a right-click on a project. Select Properties Java Build Path. On the Libraries tab expand the library 's node, select the Javadoc location attribute and press the Edit button.
